11. Creating a CSS Layout from scratch

Note: To follow this section, you'll need to install the IE standalone versions. These are unconfirmed hacks of old IE versions that you can install along side your present IE version. Let's start the hacks at the current problem child, IE5.

Load up your IE5 browser. There are 2 things that I notice instantly that are wrong. The first is that the page isn't centered in the browser like it should be, and the second is that the footer has a strange alignment issue.

The alignment issue is well known, so we'll tackle that one first.

IE 5 and 5.5 do not recognize the margin: auto; css property like they should. To get around this we need to use the text-align: center; property on the body which will center the container div.

12. PSD > HTML/CSS

Download PSD

13. Encoding a Photoshop Mockup into XHTML & CSS

Continuing from a recent tutorial, [Create a Vibrant Blog Design in Adobe Photoshop](#), we'll now look at taking the concept and implementing it into an actual webpage constructed in xhtml and css. By exporting the imagery from Photoshop and coding up the page we'll

produce a working example of the overall blog design.
