

Today we will make a Metallic text effect in Photoshop. This tutorial is based on very simple steps.

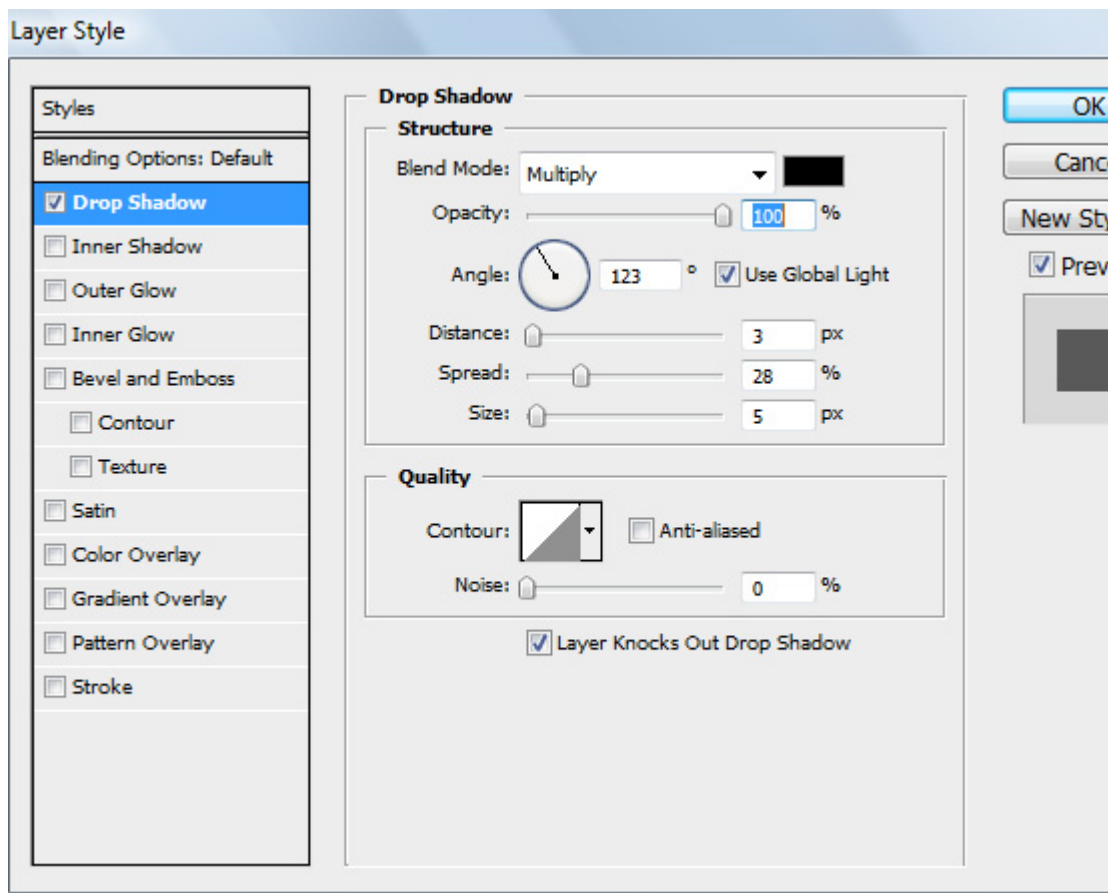

Step 1.

Using the Type (T) tool type the text you want. Use bigger font. I have used Impact font.

TUTORIALS PALACE

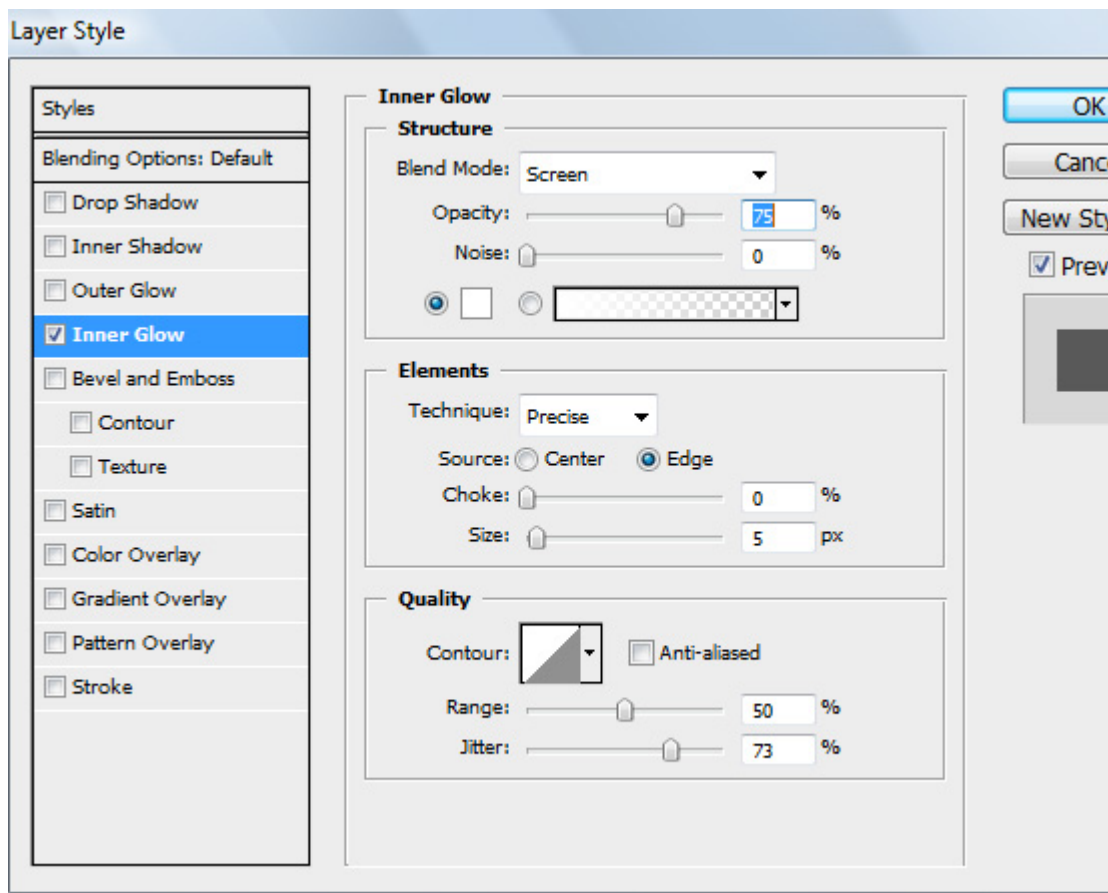

Step 2.

Apply Drop Shadow layer effect with parameters as shown in the picture. To display Layer Style dialog window, just double click on the layer in the Layers palette.

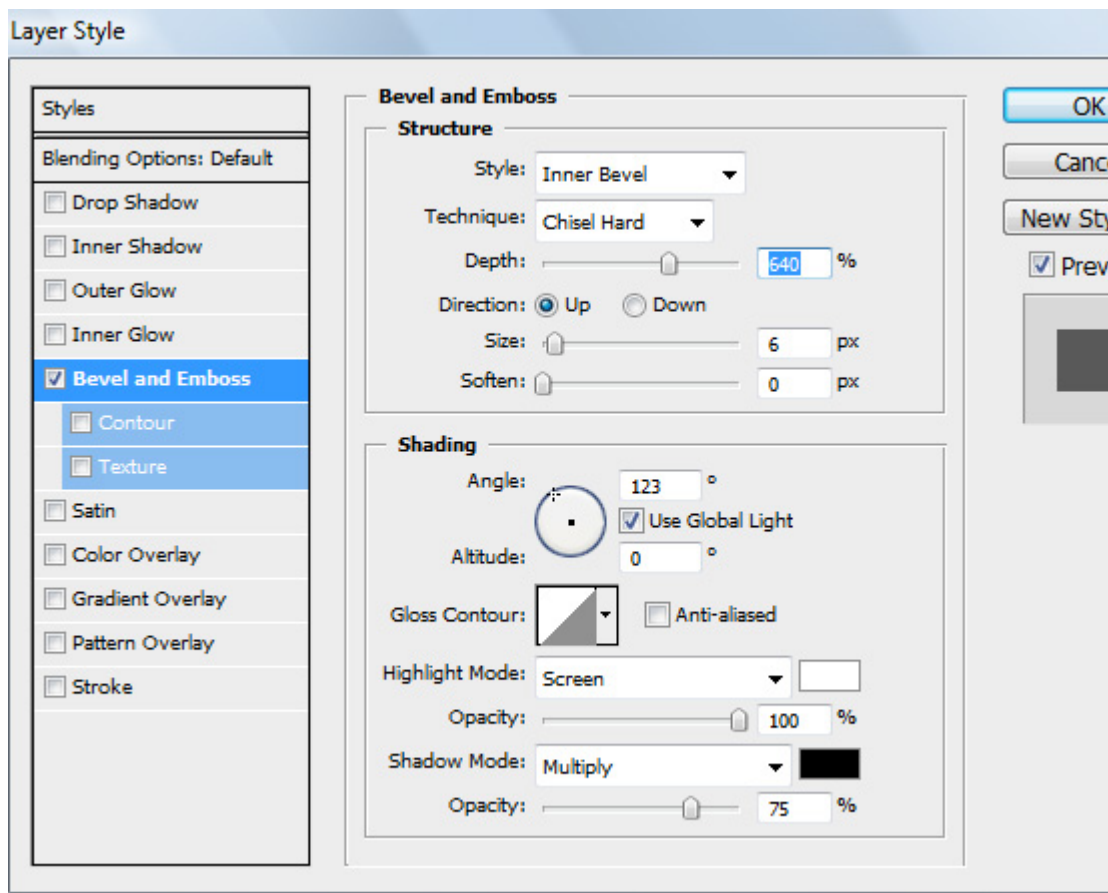

Step 3.

Apply Inner Glow layer effect with parameters as shown in the picture.

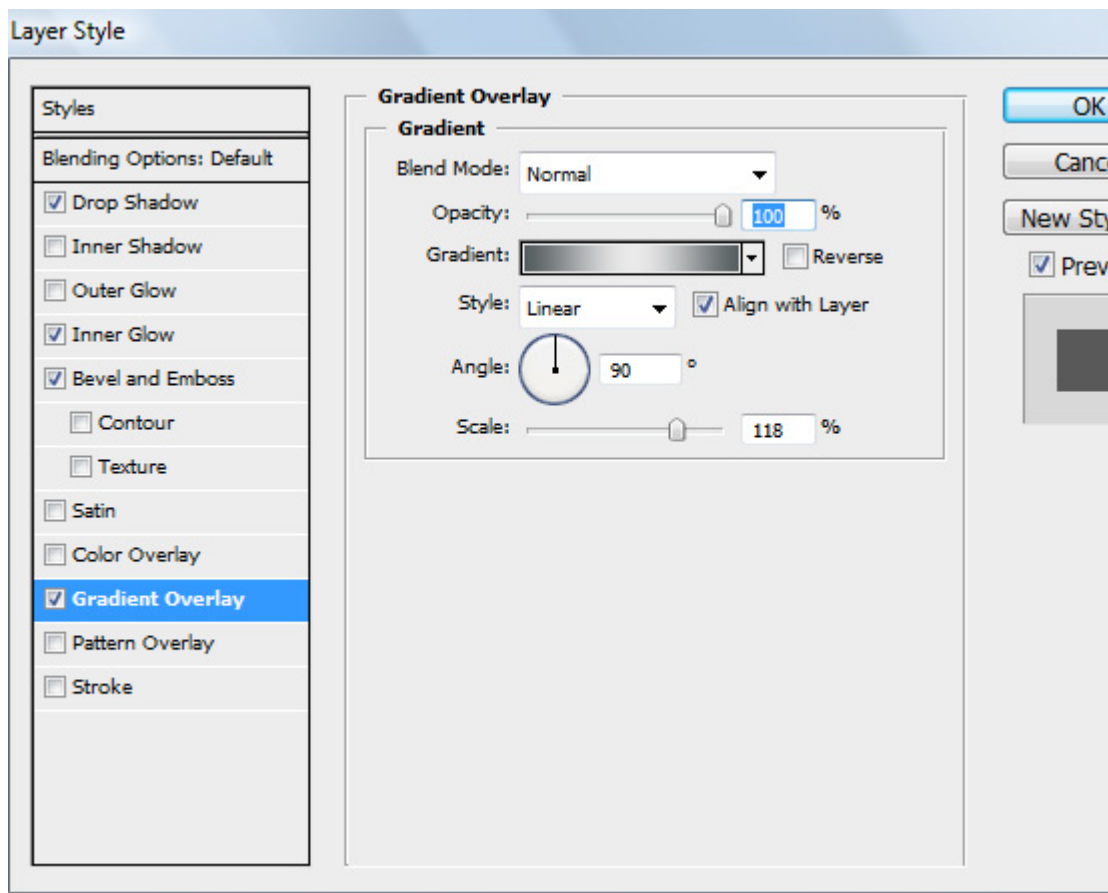

Step 4.

Apply Bevel and Emboss layer effect with parameters as shown in the picture. One of the new features of Photoshop 6 allows you to have sharp bevel regardless of it's size (Technique: Chisel Hard).

Step 5.

Apply Gradient Overlay layer effect with parameters as shown in the picture. To change the gradient, click on the gradient image and set the colors as shown.

Step 6.

And that's pretty much it. Nothing more but layer effects, but looks very nice!
